 ○ Drawn sample

(a) Random (sample unit)

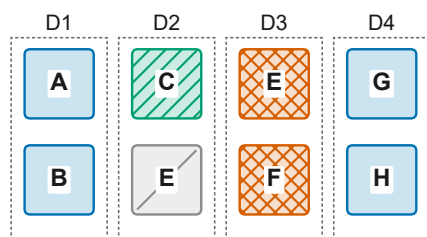

Water bodies span roles (optimistic reference)

(b) Water body (primary)

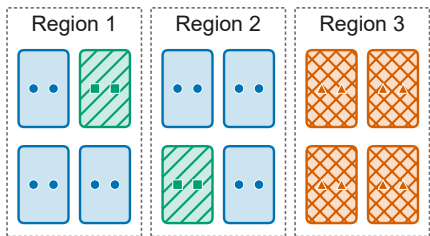

60/20/20 of water bodies, 20 repeats

(c) Contributor (dataset folds)

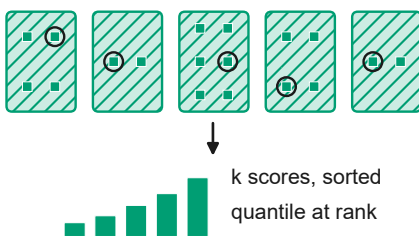

Water body E is in test fold D3:
its rows in D2 are removed

(d) Region (leave one out)

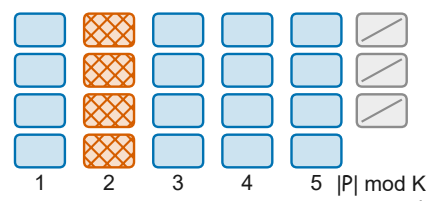

Calibration water bodies from non-test regions

(e) Single subsampling (calibration)

k scores, sorted
 quantile at rank
 $\text{rank} = \text{ceil}((1 - \alpha)(k + 1))$; infinite if $> k$

(f) Group CV+ (equal folds)

Folds of water bodies; fold 2 held out

$K = 5$ drawn; $K = 10$ used
